Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1-8 are rejected under 35 U.S.C. 102(a) as being anticipated by Amburgey (US 2002/0131262 A1).

3. A light switch comprising a housing; a lighting element positioned within the housing; means for detecting a level of illumination surrounding said light switch; and means for illuminating said lighting element upon determining the detected level of illumination is below a predetermined value thereby aiding in locating said light switch in a room illuminated below a predetermined level (figs 1,6, pp.6 Para. 0021-0022), said means for illuminating said lighting element is a light sensor (38), means for comparing said level of light sensed by said sensor with a threshold value, wherein upon said level of light being below said threshold value, said lighting element is illuminated (pp2, Para 0022), said housing is at least one of translucent and transparent for allowing light emitted from said lighting element to pass freely there through (fig 1).

- A receptacle having a face plate; at least one lighting element positioned around the periphery of said face plate; and means for detecting a level of illumination surrounding said electrical outlet; and means for illuminating said at least one lighting element upon determining the detected level of illumination is below a

predetermined value thereby aiding in locating said electrical outlet in a room illuminated below a predetermined level (fig 1, pp.2 Para. 0022).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 9-11 rejected under 35 U.S.C. 103(a) as being unpatentable over Amburgey.

6. Amburgey discloses the claimed invention except for the recitation of a second lighting element. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have a second lighting element in the device of Amburgey since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8.

- Means for comparing said sensed load value with a threshold value for determining the capacity of a circuit (42).

Allowable Subject Matter

7. Claims 12-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
